

ABS INTERNATIONAL TRANSPORT

The ABS-Asphalt-Beton-Service GmbH & Co KG , in 24568 Kaltenkirchen is a branch of a bigger construction company, active in all kind of construction - mainly road milling and road construction.

Having a lot of heavy construction machinery we are busy in heavy duty transports for our own purposes and for others, accompany-service for these transports and the transport management including organizing the permits.

Since road construction is mainly a seasonal business we began working as a haulier pulling semis for other companies in November 2012. We started pulling fridges and regular trailers to keep our trucks busy and found out that it has been working very well. In April 2013, when our trucks had to go back into construction service we got us four additional trucks to keep working as a haulier all year long.

We got Volvo trucks equipped with ADR-equipment. All our drivers have a permit to carry ADR goods in trailers. (not tank containers or trailers). All trucks are equipped with the necessary parts to secure the loads.

The height of the fifth wheel is 1,10 m for regular euro standard trailers. The trucks all have road tax equipment for Germany, Austria, France, Italy, Spain and permanent EU-vignettes.

Our company has a sufficient freight insurance and a EU-Permit. Additional we have a permit to haul trailers from and to oversea ports and train stations on Sundays and holydays in Germany.
